                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention describes heparanase-specific molecular probes, useful for methods of detecting heparanase in situ. The probes and antiheparanase, for diagnosis and monitoring of diseases (especially netastasis), for treatment of heparanase-associated diseases (e.g. tumours, (adeno)carcinoma, squamous cell carcinoma, teratocarcinoma, mesothelioma, melanoma, lymphoma or leukemia, a solid cancer (or its metastases) derived from liver, prostate, bladder, breast, ovary, cervix, colon, skin, intestine, stomach, uterus and pancreas, kidney disease, diabetes and inflammation, haemorrhagic nephritis, nephrotic syndrome, sepsis and inflammatory or autoimmune disease), for targeted drug delivery (e.g. of anticancer agents) and as research reagents. The present sequence represents human heparanase, which is used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 543 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Example; Page 81-82; 90pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Heparanase-specific molecular probes useful for diagnosis and treatment, e.g. of tumors, and for targeted drug delivery.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Pecker I, Vlodavsky I,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               δ
activity. The heparanase (hpa) polynucleotide is useful in gene therapy particularly in treating tumour, inflammation or autoimmunity. Particularly, the polynucleotide is useful in modulating the particularly, the polynucleotide is useful in modulating the bioavailability of heparin-binding growth factors, cellular responses the heparin-binding growth factors (e.g. bFGF) and cytokines (e.g. interleukin (II)-8), cell interaction with plasma lipoproteins, cellula susceptibility to certain viral and some bacterial and protozoa infections, or disintegration of neurodegenerative plaques. The polynucleotide is also useful in wound healing (e.g. thermal, chemical radiation burns), and in the treatment of angiogenesis, restenosis, atherosclerosis, inflammation, neurodegenerative diseases (Gerstmann-Straussler Syndrome or Creutzfeldt-Jakob disease), and some viral,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     conditions such as wound healing, angiogenesis, restenosis, and viral athersclerosis, inflammation, neurodegenerative diseases, and viral infections. Mammalian heparanase can be used to neutralize plasma heparin, and anti-heparanase antibodies may be applied for immunodetection and diagnosis of micrometastases, autoimmune lesions, ar renal failure in biopsy specimens, plasma samples, and body fluids. The present sequence represents human heparanase
                                                                                                                                                                                                                                             Human heparanase.

                                                                                                                                           Ś
                                                                                                                                                                                                                                                                                              The present invention describes genetically modified cells (A) containing CC a polynucleotide (I) that encodes a polypeptide with heparanase activity, CC and express recombinant heparanase (II). Heparanase cleaves heparan CC sulphate (HS) at specific intrachain sites, resulting in release of the parin-binding growth factors, enzymes and proteins that are sequestered CC by HS in basement membranes, extracellular matrix or cell surfaces. It CC may also be implicated in tumour angiogenesis and metastases. (II) is CC potentially useful in wound healing and for treating angiogenesis, CC restenosis, atherosclerosis, inflammation, neurodegeneration, viral CC infection and cystic fibrosis. It can also be used to neutralise heparin CC (an alternative to protamine) and to screen for specific inhibitors (potentially useful for treating cancer and metastases). Antibodies CC raised against (II) are used for immunodetection and diagnosis of CC raised against (II) are used for immunodetection and diagnosis of CC in large quantities, in a form that is homogeneously processed and CC activated/neutralised by a dedicated protease. The present sequence

The present sequence represents a polypeptide with human heparanase CC biological activity. Antagonists and inhibitors of the protein prevent it CC from degrading the extracellular matrix and releasing heparan sulfate CC from the extracellular matrix surface. The heparanase protein or the anti CC expression of the heparanase protein, or from excessive activity or over-CC lack of the heparanase protein, or from excessive activity or over-CC expression of the heparanase protein, respectively. The heparanase cC expression of the heparanase protein, respectively. The heparanase CC including Alzheimer's diseases such as trauma, autoimmune disease, CC golypeptide. The anti-heparanase antibody is used in treating the CC diseases like cancer, cancer metastasis, anglogenesis and inflammation of heparanase protein. The anti-heparanase activity or over expression of heparanase protein. The anti-heparanase antibody can be used to detect the presence or absence of polypeptide and its concentration. (Updated on CC 20-MAR-2003 to correct PA field.)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         405
```

The specification describes a polypeptide having heparanase (hp) activity. The recombinant protein is used as a modulator of heparin-binding growth factors, cellular responses to heparin-binding growth factors cell interaction with plasma lipoproteins, cellular susceptibility to viral, protozoal and bacterial infections

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        5
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             밁
                 The invention relates to a novel isolated nucleic acid and the PRO polypeptide encoded by it. A protein of the invention has antiinflammatory, antiarthritic, antirheumatic, immunosuppressive, osteopathic, antidiabetic, dermatological, antipsoriatic, antiallergic, antiasthmatic, hepatrotropic, and respiratory activity. A polynucleotide of the invention may have a use in gene therapy. The PRO polypeptide, it agonist, antagonist, or antibody that specifically binds to the polypeptide is useful for treating an immune related disorder such as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       PRO; antiinflammatory; antiarthritic; antirheumatic; immunosuppressive; osteopathic; antidiabetic; dermatological; antipsoriatic; antiallergic; antiasthmatic; hepatotropic; respiratory; gene therapy; immune system.
                                                                                                                                                                                                                                                                                                                                                 New PRO polypeptides and polynucleotides, useful for treating e.g. erythematosus, rheumatoid arthritis, diabetes mellitus, immune-mediated renal disease, or demyelinating diseases of the central or peripheral

CC capable of specifically printing to at teast one curvature of composition and methods of the invention are useful for controlled. The composition and methods of the invention are useful for catalytic activity (e.g. an inflammatory disorder, wound, scar, catalytic activity) an autoimmune disorder, cancer, angiogenesis, cell controlled to those conditions of carcerous condition and metastatic conditions. The vasculopathy is atherosclerosis, crestenosis or aneurysm. The cancerous condition is a solid cancer or a connected from acute lymphocytic leukaemia (CLL), chronic myelogenous conditions is a haematopoietic malignancy ce selected from acute lymphocytic leukaemia (CLL), chronic myelogenous conditions disease, non-Hodgkin's lymphomas, mat cell leukaemia, (CLM), myelodysplastic syndrome (MDS), mast cell leukaemia, cerdity, myelodysplastic syndromes, material tumours in lip and coral cavity, pharynx, plarynx, paranasal sinuses, major salivary glands, cerdity uteri, ovary, fallopian timestine, colon, colorectum, canal, liver, gallbladder, extrahepatic bile ducts, ampulla of colorectum, carcinoma and malignant melanoma of the skin, breast, vulva, carcinoma of the conjunctiva, melignant melanoma of the conjunctiva, certinoblastoma, carcinoma of the conjunctiva, melignant melanoma of the conjunctiva, retinoblastoma, carcinoma of the conjunctiva, melignant melanoma of the conjunctiva, retinoblastoma, carcinoma of the lacrimal gland, sarcoma of the orbit, carcinoma and kaposi's coral present sentence is human preprobleparanase.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Targeted drug delivery to a heparanase-expressing tissue of a patient, useful for treating heparanase-associated conditions such as inflammation or cancer, comprises administering a drug and an anti-heparanase antibody
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              of a patient, the tissue expressing heparanase. The method comprises providing a complex of a drug directly or indirectly linked to an antiheparanase antibody, and administering the complex to the patient. In the targeted drug delivery, the antibody comprises an antibody or its portion capable of specifically binding to at least one epitope of a heparanase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to a method of targeted drug delivery to a tissue of a patient, the tissue expressing heparanase. The method comprises
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Claim 2;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Yacoby-Zeevi O,
Ayal-Hershkovitz
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          (VGEL/)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       (AYAL/)

The nucleic acid is useful for preparing a composition for diagnosing or treating psoriasis in a mammal. This sequence corresponds to one of the polypeptides of the invention.

```

The invention relates to a method of identifying a mammal that will CC respond therapeutically to a method of treating cancer by administering CC an epidermal growth factor receptor (EGFR) modulator by comparing the CC level of a biomarker in a mammal before and after exposure to an EGFR cC modulator. The method comprises: (a) measuring, in the mammal, the level CC for at least one biomarker identified in the specification; (b) exposing CC the mammal to the EGFR modulator; and (c) measuring in the mammal the CC level of the biomarker, where a difference in the level in step (c) CC compared to step (a) indicates that the mammal will respond CC therapeutically to the method of treating cancer. The method and CC therapeutically to a method of treating cancer by administering an CC epidermal growth factor receptor (EGFR) modulator. This sequence CC corresponds to one of the biomarkers whose levels of expression is CC measured in the method of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Antipsoriatic protein sequence
                                                                                                                                                                                             The invention relates to novel polynucleotide and polypeptides for treating psoriasis or a sequence having at least 80% identity to the above sequences. The nucleic acid is useful for preparing a composition for diagnosing or treating psoriasis in a mammal. This sequence corresponds to one of the polypeptides of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                    New PRO nucleic acid or polypeptide, useful for preparing a pharmaceutical composition for diagnosing or treating psoriasis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               25-SEP-2002; 2002US-0414006P

Also included are a reagent for detecting atopic dermatitis or psoriasis, a kit for screening for treatments, a transgenic non human vertebrate animal models for the disease, an agent for inducting the diseases in mice and a DNA chip for assaying for the indicator genes. The method is used for treatment, detection and animal models for research of atopic dermatitis and psoriasis. The present sequence is a protein encoded by an indicator gene of the invention.

                                                                                                                                                                                                                                                                                                   Query Match
                                                                                                                                                                                                                                                                                                                                                   genome comprises an exogenous polynucleotide sequence, including a promoter active in tissues of the non-human, a region encoding a human heparanase, where the promoter and the region encoding human heparanase are operably linked in the exogenous polynucleotide such that human heparanase is expressed in at least a portion of the cells of the non-human animal. The methods and compositions of the present invention are useful for the production of transgenic animals expressing heparanase, to be used as models for human diseases such as cancers, viral infection, restenosis, neurodegenerative diseases, atheroselerosis and pulmonary disorders. The present sequence is human hpa protein used in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New transgenic non-human animal expressing heparinase, useful for human disease, such as cancers, viral infection, neurodegodiseases, restenosis, atherosclerosis and pulmonary disorders
                                                                                                                                                                                                                                                                                                                             Sequence

                                                                                                              Ş
                                                                                                                                                                                                                                                                                                                                                                           CC This invention relates to novel human genes and gene product which are cc implicated in certain disease states. Compounds which modulate the CC proteains of the invention may have cytostatic, antiinflammatory, CC ophthalmological, antiarteriosclerotic or vulnerary activities. The CC sequences of the invention may be useful for gene therapy. The invention cc such as tumourigenesis, angiogenesis, apoptosis, inflammation, CC such as tumourigenesis, angiogenesis, apoptosis, inflammation, CC erythropoiesis, or the biological response to hypoxia conditions CC including processes such as glycolysis, gluconeogenesis, glucose CC transportation, catecholamine synthesis, iron transport or nitric oxide CC synthesis. The disease includes cancer, ischaemic conditions, reperfusion CC injury, retinopathy, neonateal stress, pre-eclampsia, atherosclerosis, CC inflammatory conditions or wound healing. The present sequence is that of CC a disease related protein of the invention.
                                                                                                                                                                                          Query Match

Other uses of the heparanases include sequencing sulfated molecules such as HSPG. The present sequence represents a human heparanase

This invention describes a novel heparanase inhibitor which can be used for the treatment or prevention of cardiac insufficiency and associated indications, symptoms and/or malfunctions. The heparanase inhibitor of the invention has cardiant, nephrotropic and hepatotropic activity. The products of the invention can be used in human and veterinary medicine, for the treatment or prevention of congestive heart failure e.g. primary cardiomyopathy. Associated conditions treated or prevented with the inhibitor are especially peripheral odemas, pulmonary and hepatic congestion, dyspnoea, hydrothorax and ascites. Renal problems, e.g. nocturia can also be treated. This sequence represents the human heparanase protein described in the method of the invention
                                                                                                                                                                                                                                                                                                              Treatment or prevention e.g. pulmonary congestic

Polynucleotides encoding mammalian endoglucuronidases, especially heparanases, useful to promote wound healing.

Claim 6; Page 69-73; 112pp; English.

The invention relates to nucleic acid sequences that encode heparanase enzymes having endoglucuronidase activity. Recombinant heparanases are capable of removing the HS side chain from heparan sulfate proteoglycan (HSPG). Sulfated oligosaccharides, sulphonates or HSPG can be used to inhibit heparanase, this is useful for treatment of a physiological or medical condition associated with elevated heparanase activity, such as metastasis, angiogenesis, wound healing, angioplasty-induced restenosis, arteriosclerosis, atherosclerosis and inflammation. The human, murine and rat heparanases can be used to enhance wound healing, especially associated with tissue development and repair. The conditions mentioned
